

NetSTAR, Inc. announces WebApp Compass® at RSA Conference 2017 (#RSAC 2017)

The Global Leader in Web Categorization and Threat Intelligence Provides Solution for Categorizing Web Apps and Services

San Francisco, CA. – February 13, 2017 – NetSTAR, Inc. is pleased to announce the official release of “WebApp Compass®” at the RSA Conference 2017 in San Francisco, CA (#RSAC 2017). WebApp Compass is NetSTAR’s newest categorization technology, accompany the industry’s premier inCompass Web Categorization and Threat Intelligence technology, that will provide OEM partners with more insight of WebApps and Services.

WebApp Compass will allow OEM partners to integrate a local SDK or Cloud-based SDK into their product(s)/solution(s) to categorize URL and IP address traffic by WebApp Name, WebApp Category, Host Name, and Reputation Score. NetSTAR is leveraging it’s global web categorization database of over 32 billion URL and domains, threat intelligence database, reputation analysis, and daily telemetry from over 800,000,000 globally distributed endpoints, to provide the industry’s solution vendors a comprehensive WebApp and Services intelligence solution.

For over 17 years NetSTAR has been recognized as the global leader in OEM Web Categorization and Threat Intelligence. With over 250 OEM partners globally distributed, NetSTAR has visibility to over 800,000,000 endpoints/clients. This visibility and expertise provides an unprecedented level of knowledge about websites and web services, providing the industry's largest and most comprehensive OEM WebApp Categorization solution.

The WebApp Compass engine can be deployed as a local SDK or accessed via NetSTAR's globally distributed Cloud network. Integrating WebApp Compass into a new or existing solution is simple and requires minimal resources.
